Attachments: Additional Fill & Drainage Activity.pdf

Gentlemen,

This slide highlights an additional area of concern to the Southeast of the area we had highlighted in our previous material. The barns depicted in the imagery may be used for orientation to the other areas.

Please feel free to pass this material on to other concerned agencies.

Thank you,
Concerned Residents

Chan and Patrick,

The attached file outlines an additional concern that the county improperly accepted a low-level wetland categorization provided by the developer's consultant.

By accepting a Category IV wetland rating rather than a Category I, as the county had determined recently for the same wetland on a different project, that county allows buffers that will be significantly smaller and more threatening to the wetland.

Additionally, the county partially refunded the developer's fees for the critical areas designation, partly because the "level of effort" exerted by the county did not justify the expense.

Thank you,
Concerned Residents
